

SmartPrint

Overview

The SmartPrint card printing and personalisation software provides an advanced yet easy to use interface to enable the printing and encoding of smart cards and the printing of non-smart cards. Using a windows-based card printer, web services and an xml file containing both print layout information and cardholder details captured during the application process, this package provides a fully integrated approach to card production

Features

- Windows based printing
- Supports HDP 5000, 820 and 600 Card Printer; Eltron Card Printer
- MIFARE 1k and 4k encoding (ISO/IEC 14443 standard)
- Java encoding (ISO/IEC 7816 standard)
